

A suite of software as a service (SAAS) for more simplicity and precision

KEYWATT® CLOUD SUITE

For a smooth software experience at the forefront of customer needs

KEYWATT® KCS : SET Module

«I'm purchasing custom Keywatt® chargers and monitoring the progress of their production.»

ZOOM ON KCS : SET

- Order tracking and pre-configuration of charging stations.
- SET is the tool that allows managers in charge of deploying charging station networks to efficiently manage their deployment.
- The charging stations are pre-configured with numerous customization options that can be modified and verified before delivery. Commissioning becomes simple, fast, and takes into account all the specificities of the station's operating site.

KEYWATT® KCS : CARE Module

«I need to maintain my Keywatt® charging station and be proactive in managing my portfolio.»

ZOOM ON KCS : CARE

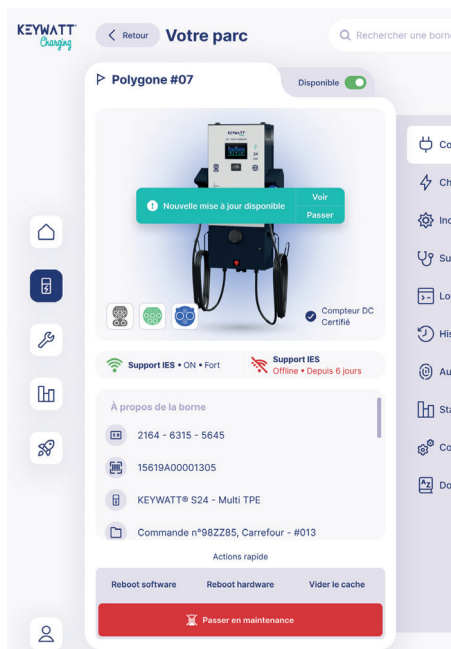

Real-time historical data

Quick filters

Borne ID card

- Access maintenance data easily via email every quarter and track their evolution.
- Send requests and commands to remotely control a charging station, via the OCPP protocol, directly from the KEYWATT® Cloud Suite.
- The KEYWATT® CLOUD SUITE allows you to control and update your charging stations with just one click.
- Enabling both corrective and preventive maintenance operations to be more convenient and providing a history of specific tasks.

CARE INDICATORS

- Number of Charging Stations, Charging Points, Connectors, Sites
- Type of Charging Station
- KWh Charged
- Ratio of Successful Charges
- Ratio of CPO Connection Time
- Ratio of IES Backend Connection Time
- Charging Duration

- Connection Duration
- Ratio (Connection Time/Available Station Time)
- Availability
- CO2 Saved Compared to a Thermal Vehicle
- Estimated Charged Kilometers
- Real-Time Station Status
- Real-Time Power Output by the Station

KEYWATT® KCS : RUN Module

«I use and operate Keywatt® chargers for a private parking lot or depot.»

ZOOM ON KCS : RUN

- Access rules management.
- Identify and track users (via RFID cards).
- Identify and track vehicles (through their MAC addresses).
- Receive the consumption associated with all users in a fleet.
- For the deployed charging stations in France: Aggregation and transfer of charging data to the Advenir platform (start date/time of charge, end date/time of charge, and total energy delivered during the recharge).

RUN INDICATORS

- % of vehicle battery at the beginning and end of charging
- % of simultaneous charges
- % of charges not reaching the maximum power of the charging station

- Number of fleet users
- Real-time power delivered by the charging station
- Average power delivered by the charging station
